

Tuscan SeamClip™ placement for 30" x 60" tile

**Calculating approximately how many Tuscan SeamClips™ (or straps) needed:
For every 100 sq feet = 51 SeamClips™ or about 1/2 a SeamClip™ per sq. foot**

For 30" x 60" tile you need .51 Tuscan SeamClips™ per sq foot (or 7 per tile)

• Using a 30"X 60" (72cm X 152cm) 3/8" tile with a 50% offset, you should only need 6 per side, and 3 on the end, assuming your tile is nice and flat and not warped.

• Calculate how many tiles you need for the job, then take the number of tiles needed times 7 SeamClips or straps per tile. (You need 6 per side and 3 for one end, but because the tiles each share the SeamClips™ you will only need 7 per tile.)

Please Note: In general we don't recommend using our products on slate, or any tile that has a rough, textured, uneven surface, as the caps would catch on high or on low spots, making it impossible to get each tile edge even with each other. However, you can use the Tuscan Leveling System® or the Tuscan SeamClip™ on slate IF the slate is 'honed slate' where both surfaces of the slate (top and bottom) have been ground to a smooth, flat, consistent surface.
